

CCG34. Hospital Acquired Infection Performance Report

The committee considered a report by the Area Infection Control Manager which provided an oversight of all Hospital Acquired Infection (HAI) related activity across Falkirk Community Hospital and Bo'ness Community Hospitals from June to September 2020. This included details of all Staph aureus bacteraemias (SABs), Clostridioides difficile Infections (CDIs), Escherichia coli Bacteraemia (ECBs) and Device Associated Bacteraemias (DABs) for these areas with a brief summary of the investigations that had been carried out.

The risk remained that, as winter approached, that influenza and coronavirus infections would increase in frequency and present further, additional, challenges to health services.

Decision

The committee noted the report.
