

## **CCG47. Hospital Acquired Infection Performance Report**

The committee considered a report by the Area Infection Control Manager on Hospital Acquired Infection Performance Infection (HAI) report related activity across Falkirk Community Hospital and Bo'ness Community Hospitals from June to September 2020.

The report provided details of all Staph aureus bacteraemias (SABs), Clostridioides difficile Infections (CDIs), Escherichia coli Bacteraemia (ECBs) and Device Associated Bacteraemias (DABs) for these areas with a brief summary of the investigations that had been carried out.

The risk remained that, as winter approached, that influenza and coronavirus infections would increase in frequency and present further, additional, challenges to health services.

### **Decision**

**The committee noted the report.**
