### <u>List of Enclosures - Agenda Item 3</u>

	List of Enclosures - Agenda item 5	Page(s)
1.	Notice of Review Form dated 23 November 2011, supporting planning statement and traffic report.	84-87
2.	Application for Planning Permission dated 13 July 2011 along with associated plans and supporting statement.	88-132
3.	Consultation response from Scottish Water dated 2 August 2011	133-134
4.	Consultation response Environmental Protection Unit dated 5 August 2011	135
5.	Consultation response from Roads Development Unit dated 29 July 2011 and 8 September 2011.	136-157
6.	Supplementary information provided by Roads Development Unit dated 8 September 2011	158-160
7.	Consultation response from Reddingmuirhead and Wallacestone Community Council dated 2 September 2011.	161-163
8.	Online objection from Mr Danny Callaghan undated.	164-166
9.	Online objection from Mr Alexander Whyte undated.	167
10.	Letter of objection from householder, Springbank Cottage undated.	168
11.	Letter of objection from Mr Colin Heggie dated 11 August 2011.	169-170
12.	Letter of objection from Mr and Mrs J Morton dated 12 August 2011.	171
13.	Letter of objection from J and M Aitken dated 15 August 2011.	172
14.	Response from Roads Development Unit dated 6 December 2011 advising of no further comments.	173
15.	E-mail representation from Mr Alexander Whyte following notice of review dated 5 December 2011.	174
16.	E-mail representation from Mr Danny Callaghan following notice of review dated 8 December 2011.	175-176
17	. Report of Handling dated 16 September 2011	177-182
18	. Refusal of Planning Permission dated 16 September 2011	183
19	. Extracts from Falkirk Council Local Plan - Policy SC2 and SC8	184-185
20	). Supplementary Planning Guidance Note - House Extensions and Alterations	186-213
21	l. Copy of request for written submissions dated 10 February 2012	214
22	2. Response to written submissions request from Roads and Design dated 21 February 2012	215-218
23	3. Comments from applicant's agent on response from Roads and Design dated 5 March 2012	219-230

#### NOTICE OF REVIEW

UNDER SECTION 43A(8) OF THE TOWN AND COUNTRY PLANNING (SCOTLAND)
ACT 1997 (AS AMENDED)
IN RESPECT OF DECISIONS ON LOCAL DEVELOPMENTS

Falkirk Council

THE TOWN AND COUNTRY PLANNING (SCHEMES OF DELEGATION AND LOCAL REVIEW PROCEDURE) (SCOTLAND) REGULATIONS 2008

IMPORTANT: Please read and follow the guidance notes provided when completing this form. Failure to supply all the relevant information could invalidate your notice of review. Please note that the guidance notes are issued by the Scottish Government. They apply to planning authorities generally and not specifically to Falkirk Council

In terms of the Act and regulations referred to above, Falkirk Council's Planning Review Committee sits as the "local review body".

Please use BLOCK CAPITALS if completing by hand.

#### Review procedure

The Planning Review Committee will decide on the procedure to be used to determine your review and may at any time during the review process require that further information or representations be made to enable them to determine the review. Further information may be required by one or a combination of procedures, such as: written submissions; the holding of one or more hearing sessions and/or inspecting the land which is the subject of the review case.

Please indicate what procedure (or combination of procedures) you think is most appropriate for the handling of your review. You may tick more than one box if you consider that the review should be conducted by a combination of procedures. Please note, however, that the final decision as to procedure will rest with the Planning Review Committee.

#### Statement

You must state, in full, why you are seeking a review on your application. Your statement must set out all matters you consider require to be taken into account in determining your review. You may not have a further opportunity to add to your statement of review at a later date. It is therefore essential that you submit with your notice of review, all necessary information and evidence that you rely on and wish the Planning Review Committee to consider as part of your review.

If the Planning Review Committee issues a notice requesting further information from any other person or body, copies of any such information received will be sent to you and you will have a period of 14 days in which to comment on any additional matter which has been raised by that person or body.

State In the space provided the reasons for your notice of review and all matters you wish to raise. If necessary, this can be continued or provided in full in a separate document. You may also submit additional documentation with this form.

PLENNING STRICHENT TRAFFIC REPORT

1. 2. 3. 4. 5. 6. 7. 8. 9. Note. The planning authority will make a copy of the notice of review, the review documents and any notice of the procedure of the review available for inspection at an office of the planning authority until such time as the review is determined. It may also be available on the planning authority website.

#### Checklist

Please mark the appropriate boxes to confirm you have provided all supporting documents and evidence relevant to your review:

Full completion of all parts of this form
Statement of your reasons for requiring a review
All documents, materials and evidence which you intend to rely on (e.g. plans and drawings or other documents) which are now the subject of this review.

Note. Where the review relates to a further application e.g. renewal of planning permission or modification, variation or removal of a planning condition or where it relates to an application for approval of matters specified in conditions, it is advisable to provide the application reference number, approved plans and decision notice from that earlier consent.

#### Declaration

I the applicant/agent [delete as appropriate] hereby serve notice on the planning authority to review the application as set out on this form and in the supporting documents.

Signed

Date

23.11, 11

This form and other documents should be returned to:

The Development Manager, Development Services, Abbotsford House, Davids Loan, Falkirk FK2 7YZ

#### PLANNING REVIEW COMMITTEE

# PLANNING STATEMENT APPLICATION P/11/0465/PPP SUB-DIVISION OF PLOT AND ERECTION OF NEW DWELLING HOUSE RUMAH, SHIELDHILL ROAD, REDDINGMUIRHEAD, FALKIRK

#### BACKGROUND

Planning application P/11/0465/PPP was registered on 18<sup>th</sup> July 2011 and refused under delegated powers on 16<sup>th</sup> September 2011.

This statement sets out reasons why the planning policies, which formed the basis for refusal as shown in the decision notice, are flawed in respect of this application and that conditional planning consent should be granted. The statement is accompanied by a Traffic Report, prepared by a Chartered Civil Engineer, which focuses on the concerns surrounding the application as detailed in the Council Roads department memo of 8<sup>th</sup> September 2011.

#### **PLANNING POLICY**

The application was refused on road safety grounds, and as such was contrary to the terms of Policies SC2 and SC8 of the Falkirk Council Local Plan.

Policy SC2 Windfall Housing Development within the Urban/Village Limit lists a range of six criteria which justify windfall housing development. Five of these can be achieved by the applicant. Council concern relates to points (4) and (5) i.e. whether roads, in this case Shieldhill Road, have the capacity to accommodate the proposal.

More importantly, SC8 Infill Developments and Sub-Division of Plots sets out guidance against which proposals for infill developments/sub-division of plots are assessed. Six criteria relate to scale, density, garden ground, privacy, character and amenity – these can be complied with/achieved by the applicant. Only (5) is at issue – the proposed vehicle access and other infrastructure should be of adequate standard. This matter is addressed in the Traffic Report.

It is therefore clear that the various planning criteria contained in these policies are achievable with the possible exception of road safety related matters.

#### TRAFFIC REPORT

The points of concern raised by the Council Roads department have been carefully assessed by an independent Civil Engineer, whose attached study examines

- 1. visibility to the east of the site
- 2. safety record
- 3. traffic survey data

It is concluded that the proposal meets the latest access and visibility standards. Furthermore, accident records used by the Council should be reviewed and it is argues that options are available to improve the existing

speed and accident situation. In respect of the final point, the applicant is prepared to make an appropriate financial contribution.

#### CONCLUSION

It is submitted that the Planning Review Committee should reconsider the refusal decision, ideally on the basis of this report together with a site visit. The 'planning' guidelines contained in Policies SC2 and SC8 can be met. Furthermore, the 'roads' basis for refusal should be reassessed in line with the findings of the Traffic Report. For these reasons conditional consent should be granted.

#### Formed

Scotland's best streets provide some of the most valuable social spaces that we possess. The process of street design offers an opportunity to deliver far more to our society than simply transport corridors. Well-designed streets can be a vital resource in social, economic and cultural terms; they can be the main component of our public realm and a core element of local and national identity. Well-designed streets can also be crucial components in Scotland's drive towards sustainable development and responding to climate change. Attractive and well-connected street natworks encourage more people to walk and cycle to local destinations, improving their health while reducing motor traffic, energy use and pollution.

Historically, Scotland has produced a wealth of unique and distinctive streets, squares, mews and lanes, and I believe that there is a great deal that can be learned from our past successes in this regard. Designing Streets is now positioned at the heart of planning, transport and erchitecture policy. This document underplus Scottish Ministers' resolve to move away from a prescriptive, standards-based approach in order to return to one which better enables designers and local authorities to unlock the full potential of our streets to become vibrant, safe and attractive places.

I welcome Designing Streets as a new policy document which puts place and people before the movement of motor vehicles. The Scottish Government is committed to an agenda of sustainable development that focuses on the creation of quality places and Scottish Ministers believe that good street design is of critical importance in this effort. This policy statement represents a step change in established practices and, given the direct influence that streets can have on our lives and environment, I believe it to be an essential change.

before movement

John Swinney MSP

Cabinet Secretary for Finance and Sustainable Growth

The stopping sight distance (SSD) is the distance within which drivers need to be able to see ahead and stop from a given spead.

The SSD values used in *Designing Streets* are based on research into deceleration rates, driver perception-reaction times and speed. These SSD values are appropriate for residential and lightly trafficked streets. The table below shows the effect of speed on SSD. These values are independent of traffic flow or type of road, it is recommended that they are used on all streets with 85th percentile well weather speeds up to 60kph.

Below around 20 mph, shorter SSDs themselves may not achieve low vehicle speeds: the design of the whole street and how this will influence speed needs to be considered at the start of the process; e.g. the positioning of buildings and the presence of on-street parking.

Further information on SSDs, including details of the calculation formula, and also the relationship between visibility and speed is available in TRL Report No. 3321 and TRL Report No. 66112.

Visibility requirements

Visibility should be checked at junctions and along the street. Visibility is measured horizontally and vartically.

Using plan views of proposed layouts, checks for visibility in the horizontal plane ensure that views are not obstructed by vertical obstructions.

Checking visibility in the vertical plane is then carried out to ensure that views in the horizontal plane are not compromised by obstructions such as the crest of a hill, or a bridge at a dip in the road ahead. It also takes into account the variation in driver eye height and the height range of obstructions. Eye height is assumed to range from 1.05 m (for car drivers) to 2 m (for lony drivers). Drivers need to be able to see obstructions 2 m high down to a point 600 mm above the carriageway.

#### Visibility splays at junctions

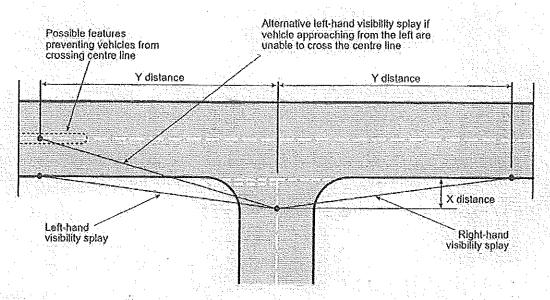

The visibility splay at a junction ensures there is adequate inter-visibility between vehicles on the major and minor arms.

The distance back along the minor arm from which visibility is measured is known as the X distance. It is generally measured back from the 'give way' line (or an imaginary 'give way' line if no such markings are provided). This distance is normally measured along the centreline of the minor arm for simplicity, but in some circumstances (for example where there is a wide splitter island on the minor arm) it will be more appropriate to measure it from the actual position of the driver.

The Y distance represents the distance that a driver who is about to exit from the minor arm can see to his left and right along the main alignment. For simplicity, it is measured along the nearside kero line of the main arm, although vehicles will normally be travelling a distance from the kerb line. The measurement is taken from the point where this line intersects the centreline of the minor arm (unless, as above there is a splitter island in the minor arm).

When the main alignment is curved and the minor arm joins on the outside of a bend, another check is necessary to make sure that an approaching vehicle on the main arm is visible over the whole of the Y distance. This is done by drawing an additional sight line which meets the nearest wheel track at a tangent.

Some circumstances make it unlikely that vehicles approaching from the left on the main arm will cross the centreline of the main arm – opposing flows may be physically segregated at that point, for example. If so, the visibility splay to the left can be measured to the centreline of the main arm.

#### X and Y distances

An X distance of 2.4 m should normally be used in most built-up situations, as this represents a reasonable maximum distance between the front of the car and the driver's eye.

A minimum figure of 2 m may be considered in some very lightly-trafficked and slow-speed situations, but using this value will mean that the front of some vehicles will protrude slightly into the running carriageway of the major arm. The ability of drivers and cyclists to see this overhang from a reasonable distance, and to manoeuvre around it without undue difficulty, should be considered.

Using an X distance in excess of 2.4 m is not generally required in built-up areas.

The Y distance should be based on values for SSD.

17

Counted happing used have of large mas of positions oxiose the constrains of the constraint and dispose to perhapsion desire has. The principles by the placement and term of the edition these has. The principles has been expensed and term of the edition these has.

#### Spacing of junctions

The spacing of junctions should be determined by the type and size of urban blocks appropriate for the development. Block size should be based on the need for permeability and, generally, tends to become smaller as density and pedestrian activity increases.

Smaller blocks create the need for more frequent junctions. This improves permeability for pedestrians and cyclists, and the impact of motor traffic is dispersed over a wider area. Junctions do not always need to cater for all types of traffic. Some of the arms of a junction may be limited to pedestrian and cycle movement only.

#### Turning areas

Connected street networks will generally eliminate the need for vehicles to turn around.

Where it is necessary to provide for vehicles turning (e.g. in a cul-de-sac or court), a tracking assessment should be made to indicate the types of vehicles that may be making this manceuvre and how they can be accommodated. The turning space provided should relate to its environment, not specifically to vehicle movement, as this can result in a space with no use other than for turning vehicles. To be effective and usable, the turning space must be kept clear of parked vehicles. It is essential, therefore, that adequate parking is provided for residents in suitable locations.

#### Overnus areas

Overrun areas should generally be avoided in residential and mixed-use streets. They can:

- be visually intrusive;
- M interfere with pedestrian desire lines; and
- pose a hazard for cyclists.

Overrun areas can, however, help to overcome problems with regular or high volume access for larger vehicles.

#### Frontage access

One of the key differences between streets with a 30 mph speed restriction or below and roads is that streets normally provide direct access to buildings and public spaces. This helps to generate activity and a positive relationship between the street and its surroundings. Providing direct access to buildings is also efficient in land-use terms.

It is recommended that direct access on roads with a 30 mph speed restriction is acceptable with flows of up to 10,000 vehicles per day.
